## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10, drawn to an aqueous suspension of a hydrophobic nutrient which comprises the nutrient in ester form associated with a dispersion aid selected from the group consisting of a triglyceride, an essential oil extractive, night primrose oil, fish oil, and a mixture of any of the foregoing dispersion aids; a dispersion agent; and an aqueous medium into which said associated nutrient is suspended, classified in class 424, subclass 439.
- II. Claims 11-19, drawn to a method of rendering a hydrophobic nutritional compound water dispersible comprises claim-designated process steps (a) and (b), classified in class 514, subclass 937.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product as claimed can be made by another and material materially different process. For example, in U. S. Patent 6,294,192, Patel teaches a method of rendering a hydrophobic nutritional compound

Art Unit: 1655

water dispersible comprising different process steps and different ingredients than those instantly claimed in the disclosed invention. See entire document.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species: the numerous dispersion aids recited in Claim 1; the numerous nutritional compound esters recited in Claims 4 and 13; the numerous triglycerides recited in Claims 5 and 14; the numerous essential oils recited in Claims 6 and 15; the numerous dispersion agents recited in Claims 7 and 16. The species are independent or distinct because they encompass broadly divergent chemical compounds.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, Claims 2, 3 and 12 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims

Art Unit: 1655

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
